Lab 03 — Three-Point Editing, Trims and Pacing

Adobe Premiere Pro Masterclass

C387 · Version 12 · 21 August 2026

Course: Adobe Premiere Pro Masterclass (C387)

Version: v12 · 21 August 2026

Scenario

An interview section feels slow and repetitive. The director wants a concise version that keeps the speaker's meaning.

Objective

Use three-point edits and multiple trim types to produce a deliberate 25–35 second sequence.

Supplied Premiere Pro and MP4 files

- Lab03-Reference-Output.mp4
- Lab03-Source.mp4
- Lab03-trim-pacing-Starter.prproj

Detailed procedure

1. Open the Lab03 starter, save as Lab03-Working.prproj and import Lab03-Source.mp4.

2. Create ROUGH_v01 and mark source In/Out points for the interview and B-roll ranges.

3. Use Insert and Overwrite edits intentionally; record which command you used and why.

4. Create at least one Add Edit cut using the keyboard shortcut rather than the Razor tool.

5. Use a ripple trim to remove a weak pause and confirm downstream sync.

6. Use a rolling trim to shift emphasis between two adjacent shots without changing duration.

7. Use a slip edit to improve action timing while preserving the clip's timeline position.

8. Create one J-cut or L-cut so audio bridges a picture edit.

9. Duplicate the sequence as FINE_v02 and improve shot-duration variation.

10. Export the paced sequence and compare it with the supplied reference output.

Evidence to retain

Lab03-Working.prproj, trim-decision log and paced MP4.

Acceptance criteria

- Sequence duration is 25–35 seconds.
- Ripple, rolling and slip edits are visible in sequence history or evidence.
- Dialogue meaning remains intact.
- The audio bridge sounds continuous.

Reflection prompts

- Which edit decision most improved story clarity or pacing?
- How do the sequence, track names and edit log prove that the workflow remains traceable?
- Which technical risk should be checked again before delivery?
